

Category	Weak - 1	Limited - 2	Appropriate - 3	Excellent - 4
Technical Execution & Logic	Program fails to run or fetch data; group cannot explain code or AI-generated logic.	Code is buggy or relies on manual CSVs; basic understanding of AI tools is demonstrated but limited.	Code is functional and unified; group demonstrates a well-developed understanding of the workflow and logic.	Code is flawless and robust; group shows insightful mastery of the technical architecture and AI-assisted edits.
Data Retrieval & Integrity	Data sources are missing or irrelevant; no attempt at programmatic cleaning or unit transformation.	Data cleaning is superficial or oversimplified; unit transformations (YoY, Log-Diff) are missing or incorrect.	Automated retrieval from reputable APIs is successful; data is cleaned and units are appropriately transformed.	Retrieval is precise and handles new updates; data cleaning is masterfully executed across multiple series.
Visualization & Presentation	Visualizations are largely absent, irrelevant, or unreadable; no professional formatting.	Charts are basic and lack key details like legends, labeled axes, or multiple vertical axes.	Charts are professional and include necessary "bells and whistles" like recession dates or trend lines.	Visualizations are polished and masterfully present complex relationships between macro variables.
Econometric Analysis	Econometric model is absent or entirely disconnected from the course theory.	Analysis is superficial; output (coefficients, R-squared) is present but weakly tied to economic logic.	Model (e.g., Taylor Rule, OLS) is appropriate; conclusions are correctly drawn from standard regression stats.	Analysis is precise; results are insightful and accurately address the complexities of the theoretical model.
Demo Performance & Q&A	Demo is unnavigable; group members are unable to answer questions regarding the workflow or variables.	Demo is unruly; conclusions/answers are vague; group struggles to show where API keys are handled.	Demo is competent and follows the required length; group answers logic questions with confidence.	Demo exudes confidence; group masterfully explains complex choices like variable lags or API handling.
